AB The invention provides a process for the preparation of compds I by hydrolysis and decarboxylation of compds. II (wherein R and R2 are independently a C1-C4 alkyl group or an aralkyl group). Thus, refluxing 1-benzyl-4-((5,6-dimethoxy-2-ethoxycarbonylindan-1-on)-2-yl)methylpiperidine with KOH in aqueous ethanol for 60 min. gave 80% donepezil.

AB Disclosed are indanone deriva. and excellent sigma receptor binders containing an indanone deriva. represented by the following formula (I), pharmacol. acceptable salts thereof, or hydrates of either [wherein R1-R4 = H, halo, HO, cyano, each (un)substituted C1-6 alkyl, C3-8 cycloalkyl, C1-6 alkoxy, C3-8 cycloalkoxy, C1-6 acyl, C1-6 alkoxy-carbonyl, C1-6 alkylaminocarbonyloxy, di(C1-6 alkyl)aminocarbonyloxy, amino, CONH2, or C1-6 thioalkoxy, NO2, SH; or R1 and R2, R2 and R3, or R3 and R4 together may form an alicyclic, an aromatic cyclic, or a heterocyclic ring, or an alkylenedioxy ring; the partial structure of A-B with a dotted line represents -CH-CH2, C-CH, C(R7)-CH2; m = an integer of 0-5; R5 = H, each (un)substituted C1-6 alkyl, C2-6 alkenyl, C2-6 alkynyl, C3-8 cycloalkyl, benzyl, alicyclylmethyl, or heterocyclylmethyl, 2,2-(alkylenedioxy)ethyl; the compound is neither 1-benzyl-4-((5,6-dimethoxy-1-oxindan-2-yl)methyl)piperidine nor a pharmacol. acceptable salt thereof nor a

LS ANSWER 2 OF 17 CAPLUS COPYRIGHT 2004 ACS on STN (Continued)
hydrate of either). These compounds are sigma receptor antagonists and agonists and are useful for the prevention, treatment, or improvement of mental disorders such as disorders accompanied by cerebral vascular dementia and/or senile dementia (in particular aggressive behavior, mental excitement, wandering, delirium, hallucination, and shaking), schizophrenia, emotional disturbance, depression, neurosis, psychophysiol. (psychosomatic) disorder, and anxiety. They are also acetylcholine esterase inhibitors and useful for the prevention, treatment, or improvement of cerebral vascular dementia, senile dementia (in particular Alzheimer's type dementia), attention deficiency shaking disorder, glaucoma, myasthenia gravis, and migraine headache. Thus, 0.20 g 1-benzyl-4-[[6-hydroxy-5-methoxy-1-oxo-indan-2-yl)methyl]piperidine was dissolved in 20 mL THF, successively treated with 0.064 mL ethanol, 0.29 g Ph3P, and 0.1 mL di-Et azodicarboxylate, stirred at room temp. overnight to give, after workup and silica gel chromatog., 83%

1-benzyl-4-[[6-ethoxy-5-methoxy-1-oxo-indan-2-yl)methyl]piperidine (II). II.HCl, 1-cycloheptylmethyl-4-[[5,6-diethoxy-2-fluoro-1-oxoindan-2-yl)methyl]piperidine hydrochloride, and Donepezil hydrochloride in vitro showed IC50 of 5.1, 1.1, and 18.7 µM, resp., for inhibiting the binding of 3H-DTG to α-receptor of guinea pig's brain membrane.

AB The title compds. I (X = H, halo), their salts, or their hydrates are optically-resolved using HPLC apparatus equipped with a chiral column.

Mobile phase for HPLC may be a mixture of (a) C5-8 hydrocarbon solvents or halohydrocarbon solvents and (b) C1-8 alcs. I (X = 3-F) (375 mg,

prepared from donepezil with 3 steps) was resolved using CHIRALPAK AD as a stationary phase and hexane/isopropanol mixture (7:3) as a mobile phase

to give 138 mg (+)-I (100% e.e.) and 111 mg (-)-I (97.6% e.e.). IC50 values of (+)-I, (-)-I, and (-)-I for rat brain acetylcholinesterase were 0.32, 0.20, and 12 nM, resp.

AB The title compound and pharmacol. acceptable salts thereof are claimed.

The

title compound is useful in the treatment of senile dementia, etc. A

process for preparing the title compound is claimed. The title compound

in vitro showed IC50 of 1.3 nM against acetylcholinesterase, vs. IC50 of 6.7 nM

shown by donepezil hydrochloride.

AB Title compds. [I; R2 = H, C1-6 alkyl, C1-6 alkenyl, C1-6 alkynyl; R3, R4, R5, R6 each independently = H, C1-6 alkoxy; m = 0, 1, 2, 3, 4, 5, 6, etc].

Salts, and hydrates, having acetyl cholinesterase inhibitory activity (no data), are prepared as anti-Alzheimer agents and anti-attention deficit-hyperactivity disorder agents with formulation. Thus, the title compound II·HCl was prepared and in vitro tested for acetyl cholinesterase inhibition effect (no data).

AB The title derivative I or its pharmacol. acceptable salts, useful for prophylactic and therapeutic treatment of senile dementia, cerebrovascular dementia, and attention-deficit hyperactivity disorder, are prepared by fluorination of 1-benzyl-4-[(5,6-dimethoxy-1-indanon)-2-yl]methylpiperidine (II), followed by optional salt formation. II was treated with LiN(SiMe₃)₂/THF at -78 to -20°, then treated with N-fluorobenzenesulfonamide at room temperature for 4 h to give 76% I.

I.HCl inhibited acetylcholine esterase with IC₅₀ of 1.3 nM.

AB The title compds. [I; R1 = O, etc.; wherein Z = CH₂, CO, CH₂CH₂, (CH₂)₃; R2 = C3-8 cycloalkylmethyl, 2,2-(alkylenedioxy)ethyl, (un)substituted benzyl or heterocyclylmethyl] or pharmacol. acceptable salts or hydrates of the both, exclusive of 1-benzyl-4-[(5,6-dimethoxy-2-fluoro-1-indanon)-2-yl]methylpiperidine, pharmacol. acceptable salts thereof, and hydrates of both, are prepared. These compds. are useful for the treatment, prevention, or improvement of senile dementia, cerebral vascular dementia, attention-deficit hyperactivity disorder (ADHD), or Alzheimer's disease. Thus, hydrogenolysis of 1-(4-benzyl-4-[(5,6-dimethoxy-2-fluoro-1-indanon-2-yl)methyl]piperidine over 10% Pd-C in THF at room temperature for 4 h gave, after salt formation with HCl, 4-[(5,6-dimethoxy-2-fluoro-1-indanon-2-yl)methyl]-1-(4-hydroxybenzyl)piperidine hydrochloride (II). II showed IC₅₀ of 0.32 nM against acetylcholinesterase.

ANSWER 12 OF 17 CAPLUS COPYRIGHT 2004 ACS on STN
 ACCESSION NUMBER: 1986:504540 CAPLUS
 DOCUMENT NUMBER: 105:104540

TITLE: Electrochemical reduction of quaternized 2-pyridinio-1,3-indandiones at a mercury electrode-1. Electroreduction in aprotic medium
 AUTHOR(S): Stradins, J.; Benders, J.; Kadis, V.
 CORPORATE SOURCE: Inst. Org. Synth., Riga, USSR
 SOURCE: Electrochimica Acta (1986), 31(6), 637-43
 CODEN: ELCAAV, ISSN: 0013-4686

DOCUMENT TYPE: Journal
 LANGUAGE: English
 AB The electrochem. reduction of 2-pyridinio-1,3-indandiones (quaternized pyrophthalones and quinophthalones as well as N-ylides) was studied at a dropping Hg electrode in aprotic medium (DMF). The 1st one-electron stage ranging from -1.1 to -1.9 V leads to free-radical species in which the d. of the unpaired electron is located predominantly at the indandione moiety (radicals of the semidione type) although the pyridinium moiety is also involved. Dimerization of the resultant species gives dimers that can be identified by characteristic anodic oxidation peaks over the -0.6 to -0.9 V potential range. The dimerization rate constant determined for the primary

radicals (in case of γ-N-methylpyrophthalone) by the Nicholson method was found to be 5 + 103 l. mol⁻¹ s⁻¹. In the case of 2-methyl-2-pyridinio-1,3-indandiones, 2 types of free radical species identified by ESR were formed which correspond to 1 and 3-electron reduction

A product of 2-electron reduction was obtained by electrochem. reductive acetylation and assigned with the aid of mass spectrometry. Electroreductn. pathways for all types of compds. under investigation were proposed revealing the the indandione moiety is reduced at less neg. potentials than the pyridinium one. Quantum chemical interpretation of such reduction sequence is provided.

AB The 1-electron reduction of 1,3-dioxo-2-indanylpyridinium compds., e.g., I and II, was studied by ESR. In the radicals formed the unpaired electron is localized in the phthaloyl part of the structure unless an electron-withdrawing substituent, such as the CN group in II, is present to shift the electron to the pyridinium ring. The formation of unstable dimeric species was proposed on the basis of cyclic voltammetric expts.

AB Polarog. reduction of I, II, and III affected the indandione moiety in both aprotic and protic media. Neither the electrophilic heterocyclic substituents nor the lack of coplanarity in I-III altered the course of reduction compared to the planar pyrophthalones examined previously.
 Only pos shifts of the half-wave potentials were observed because of the inductive effect of the heterocyclic substituents.

 AB Hypotensive piperidylindenes (I and II) (R = H, Ph) and their fumarates were prepared by reduction of the corresponding 2-(or 3)-(1-methyl-4-piperidyl)-1-indanone (prepared by 3 multistep methods) by NaBH₄ (R = H) or PhLi (R = Ph) and H₂SO₄-dehydration of the resulting indanol. Thus, Pt oxide-catalyzed hydrogenation of 4-(β-carbethoxy-α-phenylvinyl)-1-methylpyridinium iodide (from MeI reaction with Et β-phenyl-4-pyridineacrylate) gave Et 1-methyl-β-phenyl-4-piperidinepropionate (as the fumarate), which was hydrolyzed with NaOH and the product treated with polyphosphoric acid to give 3-(1-methyl-4-piperidyl)-1-oxoindane fumarate, which was treated with NaBH₄, then 2M H₂SO₄ to give I (R = H).

 20.5-160°; fumarate m. 179-80°. Redn. of XV with NaBH₄ yields the corresponding indanol (XVI), fumarate m. 210-11°. Reaction of XV and PhLi gives 1-phenyl-3-(1-methyl-4-piperidyl)-1-indanol (XVII), m. 171-2°. Dehydration of XVII gives the corresponding indene (XVIII) gives the corresponding indan, fumarate m. 168-9°. Dehydration of XVI gives the corresponding indene; fumarate m. 209-11°.

 AB The title compounds, useful for their pharmacol. properties as hypotensive agents, are prepared. Thus, Et (1-methyl-4-piperidylidene)cyanacetate is hydrogenated in the presence of PtO₂ to the corresponding saturated cyanacetate (I), b.p. 123-5°; HCl salt m. 163-4°. I, when treated with NaH followed by benzyl chloride, yields 2-benzyl-2-cyan-1-methyl-4-piperidineacetate (II); HCl salt m. 208-9°. Hydrolysis of II in methanolic NaOH yields the free acid (III), m. 244°. III is cyclized in the presence of polyphosphoric acid to 2-(1-methyl-4-piperidyl)-1-oxo-2-indancarboxamide (IV), m. 165-5.5°, which is hydrolyzed and decarboxylated by refluxing in 19% aqueous HCl to yield 2-(1-methyl-4-piperidyl)-1-oxoindan (VI), m. 99.5-101°. V reacts with PhLi to give 2-(1-methyl-4-piperidyl)-1-phenyl-1-indanol (VI), m. 185-55°. Similarly, V and p-chlorophenyllithium yields 1-(p-chlorophenyl)-2-(1-methyl-4-piperidyl)-1-indanol. m. 221-2°. Reduction of IV with NaBH₄ in iso-PROH yields 1-hydroxy-2-(1-methyl-4-piperidyl)-2-indancarboxamide, m. 224-5°. V is similarly reduced to 2-(1-methyl-4-piperidyl)-1-indanol (VII), m. 179.5-180°. Dehydration of VI with 2M H₂SO₄ yields the corresponding indene (VIII), fumarate m. 209-10°. VII similarly treated yields the corresponding indene (IX), fumarate m. 204-5°. Hydrogenation of VIII in AcOH with PtO₂ yields 1-phenyl-2-(1-methyl-4-piperidyl)indan (X), m. 125-6.5°; X.HCl m. 247-8°. IX similarly treated yields the corresponding indan, fumarate m. 220-1°. The indans can also be prepared from di-Me (4-pyridylmethylene)malonate (X I), m. 72-3°, which is formed from the reaction of 4-pyridinecarboxaldehyde, di-Me malonate, and benzoic acid in piperidine and C₆H₆. XI and PhMgBr yield di-Me (phenyl-4-pyridyl)methylmalonate (XII), m. 92.5-94°, which is hydrolyzed and acidified to the free acid, m. 250°. When treated with polyphosphoric acid, the 3-(4-pyridyl)-1-indanone (XIII), m. 111-12°, is formed. Hydrogenation of XIII in HCl and PtO₂ yields the corresponding indanol; fumarate m. 166.5-7.5°. A third method starts with Et β-phenylvinyl-4-pyridylacrylate and MeI to yield 4-[β-(carbethoxy)-α-phenylvinyl]-1-methylpyridinium iodide, m. 181-2.5°. This is hydrogenated to Et 1-methyl-β-phenyl-4-piperidinepropionate (XIV), fumarate m. 123-4.5°, hydrolysis of XIV and acidification yields 3-(1-methyl-4-piperidyl)-1-oxoindan (XV),

 AB A variety of N-methylpiperidylindene and -indenes were prepared and evaluated for analgetic activity by the phenylquinone writhing and Haffner's assays. Of these, 2-(1-methyl-4-piperidyl)-3-phenylindene (I) was quite active in the phenylquinone-induced writhing assay, but inactive in Haffner's assay. I is possibly an aspirin-type analgetic.
